Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH WHITE MEMORIAL MONTEBELLO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190081
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/25/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	htttps://www.adventisthealth.org/about-us/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:
https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

16497

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	11936	16497	72.4
Spanish Language	4342	16497	26.3
Asian Pacific Islander Languages	101	16497	0.6
Middle Eastern Languages	suppressed	16497	suppressed
American Sign Language	suppressed	16497	suppressed
Other Languages	suppressed	16497	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser: https://data.cms.gov/provider-data/topics/hospitals/health-equity

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health

information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:
https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

7931

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

10631

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

17.9

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	541	6.8	0	
Housing Instability	376	4.7	0	
Transportation Problems	327	4.1	0	
Utility Difficulties	152	1.9	0	
Interpersonal Safety	21	0.3	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser: https://hcahpsonline.org/en/survey-instruments/

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

626

Total number of respondents to HCAHPS Question 19

703

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

89.0

Total number of people surveyed on HCAHPS Question 19

5021

Response rate, or the percentage of people who responded to HCAHPS Question 19

14.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown

Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

576

Total number of respondents to HCAHPS Question 17

703

Percentage of respondents who responded "yes" to HCAHPS Question 17

81.9

Total number of people surveyed on HCAHPS Question 17

5021

Response rate, or the percentage of people who responded to HCAHPS Question 17

14.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser: https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:
https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

119

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1131

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

10.5

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	9.9	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	9.5	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			65 and older	9.3	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Medicare	11.0	1.1

Plan to address disparities identified in the data

Adventist Health White Memorial - Montebello in their commitment to address these disparities has identified that the impacted population include expected payer Medicare, Medicaid, Race, ethnicity, black, white, Hispanic, male, ages 35 and older, Spanish preferred language. In order to minimize or prevent readmissions we have Expanded our care transition navigation program to a second site Montebello. Integrated coordination of activities for care transition, post-acute and the patient navigation program under one area. We have secured an extension of navigation grants for both homeless and substance abuse population. We are in the process of opening a Hospital Based Outpatient care continuity clinic on-site for patients at high risk for readmission, including diabetes services, PT and pharmacy. The clinic is expected to open in the 4th quarter 2025. Our care nurse transition nurse participates in daily care management rounds. Discharge coordinators are scheduling patients' appointments post discharge with follow-up phone calls to patients within 72 hours of discharge.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Adventist Health White Memorial - Montebello has invested and made a priority in establishing programs focused on person centered care. Currently programs focusing in the area of education, involvement of family and community via the Community Resource Center (CRC), services provided by the CRC include connecting patients with long term resources to safely transition home in their preferred language. Our education and materials are provided according to their individual language preferences. Referrals in the community for assistance with food insecurity, obtaining insurance, qualifying for eligible insurance, housing support, partnering with TELACU to produce nurses from our local neighborhood. Graduating close to 200 nurses improving the ability to deliver care that is

respectful and caring in the patientâ??s preferred language. Our HCAHPS Patient Experience survey data shows that our higher overall scores are among Spanish preferred speakers (92%) vs. English preferred speakers. Our Patient Experience Advisory council includes a diverse membership representing our community and is focused on providing feedback taking account what our patients are telling us based on their preferences, values and personal needs.

Patient safety

Adventist Health White Memorial - Montebello demonstrates his commitment with having established a patient safety program that includes, a daily patient safety huddle where nursing leaders discuss high risk central lines, foley catheters areas and patient safety concerns that need to be escalated, this huddle is followed by a Hospital patient safety huddle where all leadership is present and individual departments report on any patient safety related issues or concerns. We have established a Hospital Acquired Infections (HAI) Unit Champion program to support staff at bedside and to decrease infections by following best practice care bundles. Developed a patient safety VTE stop light report to ensure mechanical and pharmacological prophylaxis are ordered at admission. There is hourly patient rounding performed by nursing leads and unit management. We have implemented a patient safety volunteer program. In addition to Care transitions / safe care coordination rounding performed by case management. AHWM has also implemented an IPAUSE for safety program to improve our bedside hand off communication. Our vital signs which include clinical key indicators in the areas of Hospital Acquired Infections, Falls, Pressure Injuries, are stratified, and analyzed based on age, race, gender, payer groups.

Addressing patient social drivers of health

AHWM Los Angeles / Montebello in their strategy map 2021 â?? 2025 includes identifying key community partnership for food security and providing food outreach to the community. Our Community Resource Center (CRC) provides assistance with health insurance sign up. The CRC has successfully distributed over 2,000 pantry bags containing non-perishable items and more than 600 pounds of fresh produce from the Community Garden to ensure access to nutritious food for our community members. In addition to including Farmers Market vouchers. The Community Resource Center health classes including physical health and mental health conducted at total of 472 classes, with a total participation of 10,762 people. Community Events such as Sidewalk CPR with Montebello Fire Department, Health Fairs in the cities of Montebello, Pico Rivera, Cerritos College. In addition to Community Health Education on the topics of Alzheimerâ??s & Diabetes among others to support adherence and self-management. Established a Grant funded navigation extended for substance abuse and homeless populations to guide complex care journeys.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Adventist Health White Memorial - Montebello demonstrates strong performance in delivering effective treatments as it has Implemented â??AI technologyâ?• in the Emergency Department: AHWM has implemented a solution that provides 24/ 7 real-time clinical risk guidance for emergency nurses. AI in triage help assess high risk clinical presentations and provides individualized clinical intelligence, empowering nurses to get patients on the right care pathway. Accurately identifying patient acuity in the emergency department is a time-sensitive goal, ensuring the patient receives the appropriate care. As a result of assessment decisions in the emergency department, a patient can be admitted, discharged, or transferred to a different hospital. AI technology helps the ED triage nurse make an accurate assessment of a patientâ??s Emergency Severity Index (ESI). By using data from our own patient population, we are able to refine the clinical

assessment of a patient presenting in the emergency department for appropriate care decisions. Patients who present to the emergency department and are readmitted shortly after a prior hospital discharge (commonly benchmarked at within a 30-day return window after the initial discharge) can be indicative of opportunities in patient management. AHWM conducted an analysis with patients for the following diagnoses prevalent in our patient population to assess readmission rates by race/ethnic and gender: For cardiac conditions of Acute Myocardial Infarction and Heart Failure, Hispanic or Latino Females were noted to have higher readmission rates than Hispanic or Latino Males. For sepsis, our data showed an overall strong readmission performance (Observed divided by Expected, or O/E, below 1.00) across genders. Patient volumes of Non-Hispanic or Latino ethnicity are low in our patient population, so our focus is on patients of Hispanic or Latino ethnicity.

Care coordination

Adventist Health White Memorial - Montebello shows commitment to effective care coordination by extending navigation services for both hospital and grant funded programs for Medicare high risk, substance abuse and homeless populations. In analyzing our internal data, we identified that we experience high rates of readmission among our substance abuse male population, and in our patient's experiencing homelessness. For our Medicare population we have established the following programs among others to address these disparities and support discharge needs: Post-acute follow up phone calls for both case management and care transitions follow up. Provide transportation and post discharge management of diabetes patients, with culturally competent preferred language. Developed a plan for Safe Care for substance exposed infants that includes a health navigator

Access to care

Adventist Health White Memorial - Montebello includes Access to Care as part of the strategy map 2021 â?? 2025 which includes research on social determinants and health barriers in our community. AHWM works to improve access to care by Providing free dental care, ED care for the indigent through a Queenscare partnership. Chronic Disease Management, Diabetes Care with 161 visits on average (Telehealth and In Person). This program helps patients with Weight management, diabetic control and education. Providing Free transportation for patients. Improving Health Literacy by Educating our community in health topics: cancer, stroke, cardiac, diabetes. Access to an OB Welcome Baby home visit program with an average of 119 monthly enrollments. Providing Uber-assist patient pick up from home to hospital campus, in addition to taxi vouchers. Established a Community Resource Center providing health insurance sign up support. AHWM Foundation coordinates Health Fairs providing free services such as Vision, Blood Work, Dental, Mental Health Pet Therapy, Screenings, Health Insurance Enrollment. AHWM is opening a primary care clinic focused on Medicaid population. AHWM has partnered with 2 FQHC, providing adults, pediatrics and behavioral health wellness. Most recently opening a neuro-endovascular interventional program to enhance the neurosurgical program as Stroke is an area needed due to our population having a high diabetes rate.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
